

## On going commitment to new equipment acquisitions

Crane Rental, Steel Erection, Heavy Hauling and Transportation, Rigging, and Major Projects

Crane Rental, Steel Erection, Heavy Hauling and Transportation, Rigging, and Major Projects

W. O. Grubb has once again proven it's commitment to maintaining one of the industry's largest, most modern and technologically advanced crane fleets in the nation by taking delivery it's fourth large crawler crane this year. Here's the latest addition to our large crawler fleet, the Liebherr LR1350. This 380 ton class crawler is such a versatile machine that it will be used for several different applications, such as erecting Double T's (precast concrete) for parking structures, power plant upgrades to lower pollution emissions, and with it's 36m (wind jib) it's also ideal for wind power applications for setting and servicing wind turbines.

Since January 2007, Grubb has invested in it's large crawler crane division by adding a Demag CC2200 (375 ton), a Manitowoc 16000 (440 ton), a third Liebherr LR1400/2 (450 ton) and now with it's latest addition, the Liebherr LR1350, (380 ton), W. O. Grubb has not only proven it's commitment to maintaining one of the most advanced crane fleets in the nation, but also reached above and beyond the call of duty to meet their customer's every changing needs.
